

MATHS

w/c 11th May 2020

Now we have finished our unit on Decimals, your Maths work is once again aligned with what is being set on the Home learning pages by both White Rose Maths (<https://whiterosemaths.com/homelearning/year-5/>) and BBC Bitesize (<https://www.bbc.co.uk/bitesize/dailylessons>). Lots of this will be recapping and consolidating your Year 5 knowledge of topics completed to help you feel secure in these areas. As school has a premium subscription, we have access to the videos and worksheets, all of which are provided on our school website.

This week try to complete the following lessons (video links below):

- Calculate perimeter <https://vimeo.com/413583070>
- Area of rectangles <https://vimeo.com/415436807>
- Equivalent fractions <https://vimeo.com/415436912>
- Convert between improper fractions and mixed numbers <https://vimeo.com/415436982>
- Compare and order fractions <https://vimeo.com/415437066>

Just like in previous weeks, you will find an accompanying worksheet and answers are again provided should your parents wish to work through it with you - do make sure you only use these after completing the work!

Remember, you do not need to print the worksheets, you can just answer the questions in your exercise books. Maybe take a picture of the sheet to work from in case everyone is trying to use the same computer.

If you have had a go at the White Rose Friday Challenges, these will also be available on <https://whiterosemaths.com/homelearning/year-5/> Do remember that the most suitable questions for Year 5 are Challenges 1 to 5. They are great for challenging your thinking and improving your reasoning and problem solving skills.

Mrs Elliott and Miss Dunn
